

The TWCA® seal can save up to **50%** of your outdoor water use!

- Choosing the right landscaping is choosing what's right for your community and can result in up to a 50% reduction in water consumption
- TWCA qualified grasses have been proven in independent testing to significantly reduce outdoor water use so you can be confident your choice is making a meaningful difference
- Partnering with University professors across North America and leaders in the livegoods industry; TWCA's science based approach to conservation lets you choose the savings that are right for you
- TWCA grasses need less water so watering less is easy. They'll be healthier and happier than any non TWCA qualified grass in the neighborhood.
